

Do your defect management workflows feel chaotic & disorganised?

Recording defects on paper leads to misplacing info, illegible handwriting and inaccurate data.

Matching notes to photos taken on-site is a confusing and time consuming process.

Delegating defects to subcontractors via phone, WhatsApp & email leaves no way to track progress or deadlines.

You spend countless hours compiling notes, texts and photos into a final report for project owners.

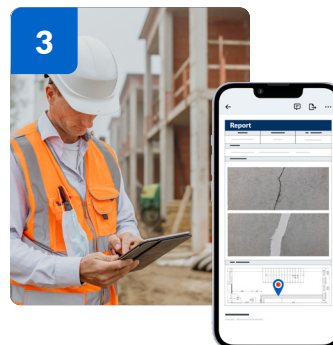

PlanRadar: Simplify defect management in one platform

1 Capture defects pinned on your project plan, adding photos, video & voice notes.

2 Delegate defects for correction with clear assignees & deadlines. Chat in-app with all conversations recorded.

3 Generate reports in just a few seconds with all relevant defect information compiled into your preferred format.

4 Own your project data, with everything stored in one central place for full claims protection.

Defect management is just the beginning

Fully flexible platform for all workflows & on-site documentation

 Site diaries

 Quality assurance

 Evidence collection

 Handovers

 Safety audits

 Inspections

 Snagging

 Claims management

No-code integrations

Connect to your existing back-office systems easily.

Safe, secure storage

Peace of mind that your data is securely stored.

Fast and simple onboarding

Easy-to-use interface keeps it simple for your team to get started
